

## *"Air" On The Side Of Safety & Savings.*

Do you know what the recommended tire pressure is for the vehicle you drive? If you are like millions of U.S. drivers, probably not. Fewer than 8 percent of vehicles have four properly inflated tires according to a Rubber Manufacturers Association sponsored survey. To help keep your car and tires road worthy, make sure to check tire pressure at least once a month & before every long road trip, including the spare. Under-inflation creates excessive stresses and heat and may lead to tire failure that could result in vehicle damage and serious injury or death. Be informed! Check the pressure with a tire gauge & inflate to the vehicle manufacture's recommended pressure. It could save your tires, your vehicle, and possibly your life!

## *Tips For Your Trip*

Summer is the perfect time to hit the road and discover new back roads in your state, drive cross country, or spend time at your favorite summer spots. A little planning and preparation will make your road trip even better. Here are some tips:

1. Book reservations for your accommodations when not staying with friends or family. Know the cancellation and late check in policies in case you get delayed on the road.
2. Have your vehicle, RV, or travel trailer inspected & serviced before you leave. Check fluids, belts, fans, hoses, filters, tires, A/C, and brakes. Also make sure your spare tire is inflated properly.
3. Pack the vehicle for safety & fun. Packing snacks, games, water, flashlight, flares, and first aid kit are just some ideas to keep your family safe and occupied during your trip.
